

Complex care needs should not defer a referral to hospice care. Roze Room Hospice is fully capable of managing the following end-of-life care needs for patients residing at home, unlike most community hospice providers. If a patient needs to receive hospice care in a facility (Board & Care, ALF or SNF), some modalities may not be permitted. Contact us to discuss individual patient needs and we'll explore all available options.

Artificial Feeding & Hydration

- IV & Subcutaneous Hydration
- TPN (short-term)
- Tube feeds (NG, G-tube)

Ascites Management

- Paracentesis/Thoracentesis (outpatient)
